ChatGPT

ServiceM8 Premium Plus deep research report

Executive summary

ServiceM8's **Premium Plus** plan (EU pricing) is positioned primarily as a **higher-usage tier**—not a separate "feature unlock" tier—offering **Unlimited Users**, **1500+ Jobs per month**, **3000+ SMS per month**, and **Unlimited AI uses per day**. [1] In the official plan feature listing, many capabilities are marked as "All plans", while some advanced modules are gated at **Growing** or **Premium**—and therefore are available on Premium Plus as well. [2]

For recreating ServiceM8, the product breaks down cleanly into: - A **dispatch & scheduling core** (Dispatch Board, Staff Schedules/Calendar, drag/drop scheduling, queues, allocations, staff leave). [3]
- A **job-centred operational record** (job card + immutable-ish Job Diary with controlled deletion/edit rules, attachments, photos, notes, checklists, badges). [4]
- A **billing engine** (quotes → invoices → payments; materials/services database; bundles; partial/progress invoicing; stock visibility when integrated; time-to-labour conversion). [5]
- A **payments layer** powered by **Stripe** [6] (ServiceM8 Pay connection to Stripe; Pay Now links; on-site Tap to Pay / Scan & Pay; fee handling). [7]
- A **workflow automation & inbound work capture layer** (Automation add-on, Email Inbox + work order scanning + auto-fill, self-serve booking via Services). [8]
- A **reporting & profitability layer** (Advanced Reporting Pack; Job Costing; Markup Billing). [9]
- A **platform/API layer** (object CRUD endpoints, Messaging API, Inbox API, Document Template API, Webhooks API; plus "event webhooks" covering job lifecycle events). [10]

Where plan-specific documentation is not explicit for a feature you named, this report marks it as **Unspecified** (plan gating) rather than guessing.

Premium Plus scope, limits, and plan gates

What Premium Plus adds in practice

EU plan pages show Premium Plus at **€299 / month** with **1500+ jobs/month** and **3000+ SMS/month**, alongside **Unlimited Users** and **Unlimited AI uses per day**. [1] A separate plan comparison (non-EU page variant) also indicates Premium Plus is the only tier that explicitly mentions **additional jobs priced per job** (while smaller tiers are "capped"). [11]

Implication for a rebuild: treat "plan" mostly as **usage metering + entitlements**, not as a completely different product surface.

Feature gates that matter for Premium Plus

ServiceM8's published plan gating (EU) indicates: - **Bundles**: "Available in Growing & Up" (so included in Premium Plus). [12]
- **Proposals**: "Available in Growing & Up". [12]
- **Markup Billing** and **Job Profitability** (profit-related tooling): "Available in Premium & Up" (so included in Premium Plus). [13]

- **Knowledge**: “Available in Premium & Up”. [13]
- **Electronic Forms** and **Asset Management** are shown as **Growing**-tier features (therefore available in Premium Plus). [13]
- “Create your own forms” capability is explicitly called out as requiring **Growing or higher** (even though all plans can buy forms from the Form Store). [14]

Regional and lifecycle caveats (important if you’re cloning behaviour)

- ServiceM8 “supports connections with **Xero** [15] and **Intuit** [16] (QuickBooks Online) worldwide, and **MYOB** [17] in Australia & New Zealand.” [18]
- The **MYOB Connector** support ended **30 November 2023** (per ServiceM8 help documentation), so treat it as legacy, region-specific, and potentially removed/changed in newer accounts. [19]
- “Tasks” as a separate module has been deprecated for new/current versions: ServiceM8 13 merged Tasks into improved Checklists; the separate Tasks add-on is “deprecated… not available for new accounts… and not available for existing accounts upgraded to ServiceM8 13 and beyond.” [20]

Dispatch, scheduling, and job execution features in Premium Plus

Below, each feature is described with **purpose**, **UI flows**, **data model elements**, **edge cases**, **permissions/limits**, and **settings/config locations**.

Dispatch Board and Calendar views

Purpose
The Dispatch Board is presented as the “central hub” where users “spend 90% of your time”, supporting job creation, scheduling, quoting/invoicing, and messaging. [21]

UI flows (Online Dashboard) - Open **Dispatch Board** (icon/tab). [21]
- Typical actions available from this hub include: - Create new jobs. [21]
- Schedule work to staff. [22]
- Create quotes and invoices. [23]
- Send SMS to staff/clients (job-linked). [24]
- Send emails with job attachments. [21]
- Calendar view: ServiceM8 notes you can view scheduled bookings on a “monthly calendar” by selecting the Calendar tab, useful for longer duration jobs. [25]

Data model elements required - `Job` (core record, status, client link). [26]
- `StaffMember` (resource schedule). [27]
- `Booking` (time-ranged assignment of a job to a staff member). [27]
- `Communication` (SMS/email artefacts tied to job diary). [28]

Edge cases - Long-duration bookings needing month view. [25]
- Overlapping bookings: “Multiple bookings can happen in the same time slot.” [27]

Permissions / plan limits - Plan gating is not specified for Dispatch Board itself; it is described as core. [21]
- Usage limits manifest via job/SMS allowances on Premium Plus. [1]

Configuration / settings - No explicit setting path is documented for “enabling” Dispatch Board; it is the primary UI surface. [21]

Bookings, drag/drop scheduling, and rescheduling

Purpose
Rapid “whiteboard” style scheduling: drag jobs onto staff schedules; move bookings when plans change.

UI flows (Online Dashboard) - **Scheduling a job**: 1. Find job in Jobs list. 2. Drag job to desired staff member/time slot. 3. Adjust duration by dragging the booking edge; optionally double-click to edit booking settings. [27]
- **Rescheduling**: 1. Dispatch Board → Staff Schedules (or Calendar view). 2. Click and drag the job booking to the new slot (staff/time). [29]
- Staff Schedules supports day/week/2-week/month display. [29]

UI flows (iPad / iOS nuances) - iPad Schedule tab supports “tap and hold” then drag booking to reschedule. [30]
- iPad “Staff Schedule” view supports drag/drop reassignment/rescheduling and “tap and hold” on an available slot to quickly schedule a job. [31]

Data model elements required - `Booking` fields: `start_at`, `end_at`/`duration`, `staff_member_id`, `job_id`. [32]
- `ScheduleViewPreferences` (day/week/month modes; sometimes per user). (UI behaviour implied; plan gating unspecified.) [29]

Edge cases - Overlaps allowed; must decide conflict handling UX. [27]
- Multi-day bookings (not fully documented in retrieved sources; mark as Unspecified).

Permissions / plan limits - Plan gating for drag/drop scheduling is not specified; appears core. [32]

Configuration / settings - Display hours are configurable (article referenced in allocation doc related links, but not retrieved; mark as Unspecified). [33]

Multi-staff bookings and “how many men are on the job”

Purpose
Assign teams (multiple staff) to one job; edit staffing and duration without rebuilding the appointment.

UI flows (Online Dashboard) - To schedule multiple staff from Dispatch Board: 1. Dispatch Board → Staff Schedules. 2. Drag job from list to a staff member at desired time. 3. Double-click booking → Staff field → select additional staff → Save Booking. [34]
- Edit duration: - For all staff: drag booking ends. - Remove a staff member: open Edit Booking → remove name in Staff field → Save. [35]
- Replace a staff member quickly: drag booking from one staff row to another. [35]

UI flows (ServiceM8 app) - Job card → Add Booking → Staff Member → select multiple staff → Save. [35]

Data model elements required - `Booking` with **many-to-many** relationship to staff (or one booking per staff member, grouped by `booking_group_id`). ServiceM8 behaviour suggests a single booking can include multiple staff and still be edited as a unit. [35]
- Suggested Teams learning is mentioned (system learns which staff are scheduled together). [36]

Edge cases - Editing one staff member's times vs all staff members: ServiceM8 supports both patterns. [35]
- Scheduling suggestions shift as staff selected. [35]

Permissions / plan limits - Plan gating unspecified. [35]

Configuration / settings - No explicit setting path for multi-staff beyond normal scheduling. [35]

Job Allocations add-on and Allocation Windows

Purpose
Allocate work without a fixed time/date: "urgent / morning / afternoon / anytime" style dispatch; used when a job needs to be done within a window, not at 2:15pm sharp.

Plan availability
Job Allocations is an add-on surfaced in the add-on directory; plan gating is not explicitly shown in retrieved plan table snippets (mark as **Unspecified**), but it is available to activate as an add-on. [37]

UI flows (Online Dashboard) - Allocation process: 1. Dispatch Board → drag job onto staff member's icon. 2. Allocation window appears; user must complete at least: - Staff Member - Booking Window before allocating. [33]
3. Optional: estimated duration, allocation start date, allocation expiry date. [33]
- Cancelling allocations: available online; note permissions may restrict schedule visibility. [33]

UI flows (ServiceM8 iOS app) - Job booking window → Allocate → set Staff Member + Booking Window (+ optional durations/dates) → Book. [38]
- The job allocation "disappears" if not completed by expiry date (behaviour explicitly described). [39]

Allocation Window configuration - Change allocation window times: - Settings → Allocation Windows → Edit → Save Changes. [40]
- "Business Hours" shortcut: - Drag-and-drop a job onto the "Business Hours" shortcut box inside Staff Schedules. [41]
- To show allocated jobs alongside fixed-time bookings in Staff Schedules: Settings → Preferences → Job Allocations → "Show allocated jobs in Staff Schedules" = Yes. [42]
- Template insertion: {job.next_booking_time} merge field can output allocation window start/end times in email/SMS templates. [43]

Data model elements required - `AllocationWindow` (name, start/end times, maybe "relative to business hours"). [44]
- `JobAllocation` (job, staff member, allocation window, optional estimated duration, start date, expiry date). [45]

Edge cases - Allocation expiry: must create "due for review" surfacing when not completed. [46]
- Visibility across staff schedules depends on security roles. [33]

Permissions / plan limits - Security role gating is explicitly mentioned for viewing others' schedules. [33]
- Plan gating unspecified. [47]

Staff Leave add-on

Purpose
Block out staff unavailability (holidays, training, appointments) in schedule views.

Plan availability
The Staff Leave add-on is described as "available on all ServiceM8 plans." [48]

UI flows - Activate: Account → Features & Integrations → activate Staff Leave (as per help article wording). [48]
- Add/edit leave (Dispatch Board): 1. Dispatch Board → Staff Schedules. 2. Right-click a staff member → "Add Leave". 3. Name leave entry and specify timing patterns. [49]
- Alternative settings reference: Settings → Staff (add-on page notes leave can be added "against a staff member in Settings > Staff"). [50]

Data model elements required - `StaffLeave` (staff_id, start/end, recurrence rules, label/name). [51]

Edge cases - ServiceM8 will display staff leave but "won't prevent you from manually scheduling a job… during these times." [50]
- Multi-pattern timing implies recurrence and exceptions. [52]

Permissions / plan limits - Plan gating: all plans. [48]

Queues (jobs on hold, pipeline stages, expiry)

Purpose
Queues provide structured "waiting rooms" for work (e.g., Parts on Order, Pending Quote), with expiry dates and review surfacing.

Plan availability
Queues appear as a ServiceM8 add-on in the help centre and add-ons directory; plan gating is not specified in retrieved plan lines (mark as Unspecified). [53]

UI flows (Online Dashboard) - Add a job to a queue: - Drag job onto queue icon/folder; set expiry date; save. [54]
- Manage queue columns and folders: - Dispatch Board → Queues tab; drag job into queue column/folder. [55]
- Job expiry behaviour: - Jobs in queues have expiry dates; on expiry they are flagged for review and will appear in Queues view and also in Action Required/Unscheduled lists. [56]

UI flows (ServiceM8 app) - Job card → Job Actions bar → More → Send Job to Queue → choose queue → optionally change expiry. [57]

Data model elements required - `JobQueue` (name, default expiry window). [58]
- `JobQueueAssignment` (job_id, queue_id, expires_at, created_at, review_state). [56]

Edge cases - Timestamp-based “due for review” vs “expired” indicators: - ServiceM8 distinguishes “Due for review” (expired within last 24 hours) vs “Expired” (older). [59]
- Jobs placed into a queue show a “yellow dot”, hover reveals queue and expiry. [60]
- Default expiry windows per queue but overridable per job. [61]

Permissions / plan limits - Not specified; likely general. (Unspecified.)

Job card, enhanced job card behaviours, Job Actions bar, and Job Diary rules

Job card fundamentals

Purpose
The job is the core record: “tracks progress from initial inquiry or quote through to completion and invoicing.” ServiceM8 states “Every new job starts as either a Quote or a Work Order.” [26]

Data model elements required - `Job` (status: Quote/Work Order/Completed etc; job number; description; client; site; assigned staff; timestamps). [62]
- `Client` / `Company` (contact details, job history). [63]

Enhanced Job Card (September 2024)

Purpose
ServiceM8 13 introduced an “Enhanced Job Card” for Dispatch Board—“expanding fields” and “side-by-side browsing of your Diary, Photos or Attachments”, and faster saving. [64]

UI flows - Opening: Dispatch Board → open job card (double click job in list/schedule). (Specific click path varies; behaviour referenced across docs.) [65]
- Recording a payment from Enhanced Job Card: - Manual payment requires job status “Work Order” or “Completed.” - If status is Work Order: Billing tab → click green “Paid” line in totals section (bottom right). - If status is Completed: either same Paid line method or workflow dropdown (top-right) → Add Payment. [66]

Edge cases - Payment UI differs by job status. [66]
- Older “legacy job card” behaviours still exist in some support docs; your clone should preserve backward-compatible data structures. [67]

Job Actions bar (mobile app)

Purpose
A configurable “favourites strip” of common actions/forms/add-on actions for speed in the field.

UI flows - Customise: 1. Tap plus (+) to add and minus (-) to remove actions. 2. Drag handles to reorder favourites. 3. Top four actions become one-tap on the bar; others appear under “More”. [68]

Data model elements required - `UserActionPreferences` per user/device: ordered list of action identifiers; favourites subset. [69]

Job Diary: record permanence, deletion, and edits

Purpose
A job's diary is presented as the "permanent record of all activity on a job." [70]

Rules and UI flows - Deletion restriction: - Content "cannot be removed" from the job diary using the ServiceM8 app; removal requires Online Dashboard. [70]
- Deleting items online: - Open job → in Job Diary pane hover an item → dropdown → Remove; photos/videos via viewer → Actions → Delete; confirm. [71]
- Editing notes: - Notes saved to diary can be edited in Online Dashboard; dropdown arrow on note → Edit → Save. [72]

Data model elements required - `JobDiaryItem` (append-only event record with type: note/photo/video/email/sms/pdf/form/etc; author; timestamps; "hidden" flag; version history for some document types). [73]
- `SoftDelete` metadata (who removed, when, reason). (Inferred necessity; implementer recommendation.)

Edge cases - Editing completed Forms removes captured signatures (explicitly documented) and can retain version history online. [74]
- Invoice/quote PDFs can be "saved forever" in diary and removed via "X" hover (legacy doc wording). [75]

Badges

Purpose
Badges are "virtual stickers" on a job card to flag key info, highlight client behaviour, and "set certain Automations in motion." [76]

UI flows - Apply badge: open job card → badges list → click badge to activate (exact click steps depend on job card; badge usage described). [77]
- Follow-up badges can generate reminders (used with recurring jobs & reminders) after job completion. [78]
- Burn List badge: - Used to flag clients with negative history; creating a new job for them triggers an immediate alert. [79]

Data model elements required - `Badge` master list. - `JobBadge` join table (job_id, badge_id, applied_by, applied_at). [80]

Edge cases - Badge-triggered automation flows imply rule evaluation on badge add/remove events. [81]

Permissions / plan limits - Plan gating unspecified.

Checklists (and the "Tasks" deprecation)

Purpose
Ensure procedures are followed; assign work items; connect forms/assets to tasks.

UI flows - Creating a checklist (Online Dashboard): 1. Open job card → Details tab → Checklist → New Item. 2. Enter items; Return/Enter to add more. [82]
- ServiceM8 13 improvements: - Assign checklist tasks to staff, attach Forms & Assets, set reminders, complete online, multiple checklists, drag-and-drop reorder. [83]
- "Form badge as checklist" behaviour: - Enabling a form badge on the job causes it to appear "as checklist" in the app to ensure staff know a form must be filled in. [84]

Data model elements required - `JobChecklist` (job_id, title, created_by, items[]). - `JobChecklistItem` (text, assigned_staff_id, due_at, reminder, linked_form_id, linked_asset_id, completed_at). [85]

Edge cases - Legacy "Tasks Add-on" is deprecated and unavailable for newer accounts/versions; you should not build a standalone tasks subsystem unless replicating legacy tenants. [86]

Billing, profitability, payments, and accounting integrations in Premium Plus

Billing tab, quotes, invoices, and "Save to Diary"

Purpose
Quote and invoice workflows are job-centric and produce PDF artefacts saved to the job diary.

UI flows - Build and send a first quote (Online Dashboard): - Job card → build quote by adding labour/materials → produce PDF → send to customer; sending email is saved to job diary. [87]
- Add materials to a job online: 1. Dispatch Board → open job. 2. Quotes & Invoicing tab → Add Material/Service. 3. Search by item code/name; select suggestions; adjust quantity; save. [88]
- "Save Quote/Invoice to Diary" (Enhanced Job Card flow): 1. Job card → Billing. 2. Dropdown arrow (top right) → Customise Quote/Invoice. 3. Select template → Save to Diary. [89]
- Invoice creation online (legacy doc note): - Produced invoice is saved to diary "forever" and removable by "X" hover. [90]

Data model elements required - `Quote` and `Invoice` versions (or "Document" with type + status + template). - `DocumentTemplate` reference. - `DiaryItem` for generated PDFs. [91]

Edge cases - Quote versions/options: multiple quote options can be produced and surfaced as separate diary line items; attached via "Smart Attachments" when emailing. [92]
- Invoice date changing: via job card billing/customise invoice. [93]

Materials & Services database, bulk import, search ranking, and "save as you go" pricing

Purpose
Create and manage a canonical catalogue of items to be billed (materials, services, labour items). Job-level line items may be drawn from or written into this catalogue.

UI flows - Add an existing/add a new material from within a job: - Adding a new item in job becomes part of your inventory for next time (online lesson wording). [94]
- Bulk import: - Account → Materials & Services → Bulk Import → download template → upload CSV → map fields → import. [95]

- Automatic archiving of inactive materials: - ServiceM8 “automatically archives inactive materials” to improve search; “inactive” defined as not added & saved to a new job card in the past 12 months (with exceptions). [96]
- “Save As You Go” item pricing: - By default, changing item Cost/Price in a job is job-only; can enable behaviour to update saved item for future jobs. - Configure: Account → Settings → Preferences → Job Settings → Items & Services. [97]

Data model elements required - `MaterialServiceItem` (code, name, type, unit, cost, price, tax rate mapping, accounting codes, “archived” flag, last_used_at). [98]
- `ItemUsage` to compute “last used in 12 months” and ranking. [99]
- `PricingUpdatePolicy` at account level for Save As You Go. [100]

Edge cases - Search order influenced by archiving: ensure staff can still access archived items. [99]
- Accounting integrations may force income account mapping for new items unless default set. [101]

Bundles

Purpose
Standardise pricing and reduce invoice clutter by rolling multiple items into one fixed-price description.

Plan availability
Available in **Growing & Up** → included in Premium Plus. [102]

UI flows - Enable Bundles: activate add-on; then: - Settings → Materials & Services → Bundles → Add Bundle, set bundle number/name; add underlying items. [103]
- Copy a bundle: - Settings → Materials & Services → Bundles → Edit bundle → three dots → Make a Copy; also possible from job card and in-app. [104]

Data model elements required - `Bundle` (bundle_code, name, fixed_price, client_facing_description).
- `BundleLine` (references materials/services/labour items; internal-only visibility). [105]

Edge cases - Underlying items “will not show” on quote/invoice—only bundle name shows—so profitability must still be computed from hidden components. [106]

Stock levels (when accounting is integrated)

Purpose
Expose inventory stock on the job billing UI when integrated with supported accounting packages.

UI flows - View stock level in app: 1. Open job → Billing → Add Item/Service. 2. Search/select item; view stock level under Quantity. [107]
- Online: “From the Dispatch Board online” also supports viewing stock (steps referenced in same article). [108]

Data model elements required - `IntegratedInventoryItem` with `stock_on_hand` (synced value). - `StockSyncState` (last sync time, source system). [109]

Edge cases - Stock levels update when invoices that used tracked items are “approved and synced” between ServiceM8 and accounting package. [108]
- Region restrictions apply for some integrations (e.g., MYOB AU/NZ; see below). [18]

Smart Labour and default labour rates

Purpose
Convert tracked job time (check-in/out timer) into billable labour automatically; streamline rate selection per staff.

UI flows - Smart Labour: 1. In app: open job → Start Job (check in) → Billing → Add Item/Service → Smart Labour. 2. Select labour rate from list; optionally set rounding (15/30/60 minutes) → Set Labour. [110]
- Labour items list logic: - Smart Labour options are pulled from Materials & Services; "Any materials with the word 'Labour' or 'Labor' in the name" appear for selection. [111]
- Default labour rate per staff: - Settings → Staff → Edit → Options → Default Labour Rate dropdown. [112]

Data model elements required - `JobCheckInSession` (checked_in_at, checked_out_at, travel time?).
- `LabourRateItem` (material/service item with "Labour" naming convention, price per hour/unit). [113]
- `StaffDefaultLabourRate` mapping. [112]

Edge cases - Rounding rules: Smart Labour supports rounding selection; editing job time entries has separate rounding behaviour (see "edit check-in data" guidance). [114]
- Travel time inclusion exists in edit job time tooling (documented for job time editing). [115]

Partial/progress invoicing

Purpose
Invoice deposits or staged payments for long-running work.

Plan availability
Premium Plus includes "Partial/Progress Invoices" in premium plan comparisons, and the feature exists as an add-on you can turn on. [116]

UI flows - Activate: - Settings → ServiceM8 Add-ons → tick Partial/Progress Invoicing. [117]
- Create a partial invoice for existing items: 1. Open job → Quotes & Invoicing. 2. Arrow next to Produce Invoice → New Partial Invoice. 3. Tick items → Confirm Invoice. [118]
- Deposit partial invoice: - Help article notes creating a partial invoice for deposit using Partial/Progress add-on; also points to deposits via ServiceM8 Pay as a more automatic method. [119]

Data model elements required - `Invoice` with line-level invoiced quantities/amounts. - `InvoiceProgress` snapshots per partial invoice. [120]

Edge cases - Payments and job status transitions (Awaiting Approval / Awaiting Payment) must reflect partial balances. [121]

Job Costing and Markup Billing

Purpose
Expose profitability signals at job and line-item levels.

Plan availability
Job profitability features are "Available in Premium & Up" → included in Premium Plus. [13]

Job Costing UI and behaviour - Job Costing add-on is designed to provide “quick estimated profit/loss” based on: - purchase costs of materials, - direct labour costs, - “hidden cost” of administration time. [122]

Markup Billing UI and behaviour - Enable: Settings → ServiceM8 Add-ons → Markup Billing. [123]
- Online: adds “Cost” and “Markup” columns in job cards. [124]
- App: item breakdown includes “Purchase Cost” and “Markup”; markup field adjustable; real-time update of markup % when cost/price edited. [124]

Data model elements required - `JobCostModel` (inputs: materials cost, labour cost, admin time cost). [122]
- `LineItemCost` (purchase cost attributed to each billed item). [124]
- `Permissions` layer around cost/profit visibility (ServiceM8 references a dedicated “who can access profit data?” article, but it was not retrieved; mark specifics as Unspecified). [125]

Edge cases - Bundle internals: hidden items must still contribute to profit. [126]

ServiceM8 Pay, Stripe, and payment methods (Tap to Pay, Scan & Pay, Pay Now)

Purpose
Take payment on site or online with minimal friction; tie payment to the job and accounting sync.

UI flows - Enable ServiceM8 Pay: - Online Dashboard → Settings → ServiceM8 Add-ons → activate “ServiceM8 Pay” → connect to Stripe (payments processor). [127]
- Online payment (“Pay Now”): - When ServiceM8 Pay is activated, invoices viewed online include “Pay Now” allowing card payment. [128]
- Taking card payments on site (ServiceM8 Pay): - Check out of job → Billing view → Add Payment → choose method (Scan & Pay / Manual Entry / Tap to Pay where available). [129]
- Tap to Pay on iPhone: - Add Payment → Tap to Pay on iPhone → client taps card/device on iPhone → done. [130]
- Device constraint: Tap to Pay requires iPhone XS or later; not available on iPads. [131]
- Scan & Pay: - App generates QR code; client scans; pays via Apple Pay/Google Pay/Android Pay or card entry. - Requires Stripe add-on active (as documented in Scan & Pay article). [132]

Fees and payouts - ServiceM8 Pay fees vary by country, card type, and subscription plan; payout speed (deposits) is “next business day” in all regions (per ServiceM8 Pay fees article). [133]

Data model elements required - `JobPayment` records (method, amount, processor transaction IDs, status). [134]
- `OnlineInvoiceLink` tokenisation for Pay Now page. [128]

Edge cases - If Scan & Pay QR screen is closed before payment, app pushes notifications for customer viewing and payment received. [132]
- Payment capture and job workflow: checkout wizard constraints—must be checked in and status Work Order to follow the “quick checkout process”. [135]

Accounting integrations (Xero, QuickBooks Online, MYOB)

Purpose
Sync clients, items, invoices, and payments to prevent double entry.

Plan availability
Accounting integrations are presented as core and surfaced as add-ons/links; plan gating is not explicit in retrieved sources (Unspecified). [136]

Xero sync behaviour - Contacts and items entered/imported into Xero sync to ServiceM8 "within 30 minutes"; Xero items import to ServiceM8 as Materials. [137]
- Xero integration marketing page describes bidirectional sync for customers/items, invoices, payments, tax rates and income account codes. [138]

QuickBooks Online sync behaviour - QuickBooks sync article describes two-way updating: clients/materials sync, and changes in either update the other. [139]
- QuickBooks Online Integration add-on page emphasises syncing customers, inventory and invoices; new customers created when you invoice; payments taken on job updated in QuickBooks. [140]

MYOB - ServiceM8 supports MYOB in Australia & NZ only. [18]
- MYOB Connector support ended 30 Nov 2023 (treat as legacy). [19]
- MYOB integration add-on page still describes supported editions and syncing behaviour; developer listed as ServiceM8. [141]

Data model elements required - `AccountingConnection` (provider, oauth tokens, sync settings). - `ExternalIDMapping` per object (client/item/invoice/payment). - `SyncLog` with retry and conflict resolution fields. [142]

Edge cases - Region gating (MYOB) and deprecations must be modelled as feature flags. [143]

Supplier invoice import

Purpose
Capture supplier costs and line items by importing PDF invoices into jobs.

UI flows - Drag and drop supplier invoice PDF onto the job card; ServiceM8 scans the PDF, extracts details, and displays in job diary similarly to emailed invoices. [144]

Data model elements required - `SupplierInvoice` (job_id, supplier_id, extracted totals, extracted line items, source_pdf_attachment_id). - `ExtractionResult` metadata (confidence, field mapping). [145]

Edge cases - Mismatched invoice formats; partial extraction; duplicates. (Implementation concerns; not explicitly documented.)

Timesheet sync and Deputy integration

Automated Timesheet Sync add-on - Purpose: export staff "Clock-On/Off times" to MYOB/Xero/QuickBooks as employee timesheets. [146]
- Source of truth: shift times recorded via "My Shift" in Activity tab; note that clock on/off differs from job check in/out. [147]
- Add-on page caveat: supports Xero accounts in Australia only. [148]

Deputy add-on - Purpose: for more complex rostering/timesheets than ServiceM8; integration records staff Clock On/Off times into Deputy as timesheets. [149]

Data model elements required - `Shift` (clock_on, clock_off, breaks). - `TimesheetExport` jobs with weekly batching, mapping to accounting/deputy entities. [150]

Add-ons available to Premium Plus

How add-ons are activated (native mechanism)

ServiceM8 describes a standard activation pattern: - Online Dashboard → Settings → ServiceM8 Add-ons → browse/search add-on → toggle OFF→ON to activate. [151]

Add-ons catalogue and comparison table

The EU add-ons directory lists the following add-ons (plus others). [152]
In the table below: - **Premium Plus included?** = "Available to Premium Plus accounts" (because Premium Plus is the top tier); separate **extra cost** may still apply and is marked where explicitly shown. - **Plan gate** is marked when documented; otherwise **Unspecified**. - **Developer** is marked when the add-on page explicitly states it; otherwise **Unspecified** in retrieved sources.

Add-on	Developer	Purpose	Plan gate (doc)	Premium Plus included?	Configurable?	Link
Forms	Unspecified	Complete paperwork on-site; completed forms become PDFs saved to job diary. [153]	Growing+ for building your own forms (doc); form store usable all plans. [14]	Yes	Yes (forms editor/ templates)	https://www.servicem8
Stripe Payments	Unspecified	Card payments and related features (Scan & Pay depends on Stripe add-on per doc). [132]	Unspecified	Yes	Yes	https://www.servicem8
Staff Leave	ServiceM8 [50]	Block staff unavailability; display in Staff Schedules; does not prevent manual booking. [154]	All plans [48]	Yes	Yes	https://www.servicem8 Leave?uuid=c7f9bfc3-1 b935-57e378675c5b

Add-on	Developer	Purpose	Plan gate (doc)	Premium Plus included?	Configurable?	Link
ServiceM8 Network	Unspecified	Share/ subcontract work orders between ServiceM8 businesses. [155]	Unspecified	Yes	Yes	https://www.servicem8
Xero Integration	Unspecified	Bidirectional accounting sync (clients/ items/ invoices/ payments). [156]	Unspecified	Yes	Yes	https://www.servicem8 integration
Badges	Unspecified	Job flags; can trigger automations; includes Burn List & follow-up badges. [157]	Unspecified	Yes	Yes	https://www.servicem8
Recurring Jobs + Reminders	Unspecified	Manage recurring jobs from Dispatch Board; reminders via badges. [158]	All plans [13]	Yes	Yes	https://www.servicem8
Self Serve Online Booking	Unspecified	Part of Services; exposes booking links + tracking codes in settings. [159]	Unspecified	Yes	Yes	https://www.servicem8 Serve-Online-Booking?u ff3b-4990-a34d-68458b

Add-on	Developer	Purpose	Plan gate (doc)	Premium Plus included?	Configurable?	Link
Services	ServiceM8 [160]	Define services + online booking forms; customers can get quote, pick time, book. [161]	Growing+ (Services list shows “Available in Growing”). [13]	Yes	Yes	https://www.servicem8 Services?uuid=e0749df dd0d1424c6fb
Automation	ServiceM8 [162]	Automated booking reminders, quote follow-up, payment chasing, post-job follow-ups. [163]	Growing+ (Automation list shows “Available in Growing”). [13]	Yes	Yes	https://www.servicem8 Automation?uuid=5aa3 fca0a851dc9b
Partial/ Progress Invoicing	Unspecified	Deposits and staged invoicing. [164]	All plans (plan comparison indicates partial/ progress invoices). [11]	Yes	Yes	https://www.servicem8
Advanced Reporting Pack	Unspecified	CSV exports + custom reports. [165]	Premium+ (reports list shows “Available in Premium”). [13]	Yes	Yes	https://www.servicem8 Advanced-Reporting-Pa bbef-4a02-8a9b-dc9fa3
Email Inbox	Unspecified	Unique email address; convert emails to jobs; attachments included. [166]	Starter+ (Email Management “Available in Starter”). [13]	Yes	Yes	https://www.servicem8 Inbox?uuid=871967d2- dad46ae4ee5b

Add-on	Developer	Purpose	Plan gate (doc)	Premium Plus included?	Configurable?	Link
Job Allocations	Unspecified	Allocate work without fixed booking time/date; allocate via booking windows. [167]	Unspecified	Yes	Yes	https://www.servicem8 Allocations?uuid=dc85c ab681d067a5b
External Calendars	Unspecified	View ServiceM8 schedule in external calendars (Outlook/ Google/Mac/ iPhone). [168]	Unspecified	Yes	Yes	https://www.servicem8
Calendar Import	Unspecified	Import staff free/busy from external iCal calendars into Dispatch Board. [169]	Unspecified	Yes	Yes	https://www.servicem8
QuickBooks Online Integration	ServiceM8 [140]	Sync customers, inventory, invoices; reduce double entry. [170]	Unspecified	Yes	Yes	https://www.servicem8 QuickBooks-Online-Inte uuid=3cfa00a1-866a-49 b5e3-0385a6d100ab
Track My Arrival	Unspecified	Live map portal link while navigating to job. [171]	All plans (plan list shows “Track My Arrival: All plans”). [13]	Yes	Yes	https://www.servicem8 My-Arrival?uuid=ff8f8b bcb7-8fa00b00faab
Customer Feedback	ServiceM8 [172]	Collect star rating + short review via smart link/ {feedback}. [173]	All plans (plan list shows “Customer Feedback: All plans”). [13]	Yes	Yes	https://www.servicem8 Customer-Feedback? uuid=d99ba01a-1bf5-4

Add-on	Developer	Purpose	Plan gate (doc)	Premium Plus included?	Configurable?	Link
Zapier	ServiceM8 [174]	Automate workflows via triggers/ actions (new job, new client, form completed). [175]	Unspecified	Yes	Yes	https://www.servicem8 uuid=77ae4011- dca0-4ee0-8d37-0eb7b
MailChimp Integration	ServiceM8 [176]	Sync clients; trigger marketing automations from job events; initial sync on activation. [177]	Unspecified	Yes	Yes	https://www.servicem8 MailChimp-Integration uuid=2ad752a7-987f-47 d024c3347e1b
Deputy	Unspecified	Timesheets/ rostering integration; exports clock on/off to Deputy. [178]	Unspecified	Yes	Yes	https://www.servicem8 uuid=15b6e7e9- ea63-4d32-89b9-95f0fa
Automated Timesheet Sync	ServiceM8 [148]	Weekly export of clock on/off shifts to accounting timesheets; Xero AU-only caveat. [146]	Unspecified	Yes	Yes	https://www.servicem8 Automated-Timesheet- e07e-444e-b1eb-7c75ff
Bundles	Unspecified	Fixed-price bundles; hide itemisation; copy bundles. [179]	Growing+ [12]	Yes	Yes	https://support.service articles/550877500942 Bundles-Add-on
Job Costing	Unspecified	Estimated profit/loss from costs + admin time. [122]	Premium+ [13]	Yes	Yes	https://support.service servicem8-add-ons/job billing/job-costing-over

Add-on	Developer	Purpose	Plan gate (doc)	Premium Plus included?	Configurable?	Link
Markup Billing	Unspecified	Cost/markup columns; per-line markup editing. [124]	Premium+ [13]	Yes	Yes	https://support.service articles/208183126-Ma
Supplier Invoice Import	Unspecified	Scan/import supplier invoice PDFs into job diary. [144]	Premium+ (plan list shows "Supplier Invoice Importing: Premium"). [13]	Yes	Yes	https://support.service articles/360000470955- Importing-works
MYOB Integration	ServiceM8 [141]	Legacy AU/NZ accounting sync; note MYOB support ended for connector. [180]	Region-limited	Conditional	Yes	https://www.servicem8 MYOB-Integration?uuid b669-4b5e5ba2913b

Premium Plus-only add-ons
Across the plan gating lines reviewed, there were **no add-ons explicitly documented as "Premium Plus only"**; add-ons are shown as "All plans", "Starter", "Growing", or "Premium", and Premium Plus appears to inherit Premium while mainly increasing monthly allowances. [181]

Developer API and webhooks mapping for implementing major features

API surface overview (official reference)

The ServiceM8 Developer API reference lists object endpoints for virtually every major data type (Jobs, Job Allocations, Job Checklists, Job Materials, Job Payments, Bundles, Job Queues, Inbox, etc.), plus messaging APIs (Email/SMS), document templating, custom fields, and webhooks subscription management. [80]

Authentication, add-on types, and rate limiting

ServiceM8's developer docs describe authentication approaches (including API keys / OAuth patterns) and the concept of different add-on types and capability sets. [182]
Rate limiting is described as a **throttling** model once a maximum requests-per-minute threshold is crossed; limits apply per add-on per account and are additive across add-ons, with exact thresholds not specified in the extracted text. [183]

Webhooks: subscription endpoints and supported event list

Endpoints - `POST /webhook_subscriptions/object` — subscribe to changes in specific fields on an object type. [184]
- `POST /webhook_subscriptions/event` — subscribe to business events. [185]
- `GET /webhook_subscriptions` — list webhook subscriptions. [186]

Object subscription request shape (form-encoded) - Required: `object`, `fields` (comma-separated), `callback_url` - Optional: `unique_id` [187]

Event subscription request shape (form-encoded) - Required: `event`, `callback_url` - Optional: `unique_id` - Event enum list includes (not exhaustive here): `job.created`, `job.updated`, `job.status_changed`, `job.completed`, `job.checked_in`, `job.checked_out`, `job.quote_sent`, `job.quote_accepted`, `job.invoice_sent`, `job.invoice_paid`, `job.queued`, `job.badge_added`, `job.badge_removed`, `form.response_created`, `inbox.message_received`, `job.review_received`, `staff.clocked_on`, `staff.clocked_off`, and proposal-related events. [188]

Endpoint mapping per major feature

The table below lists **endpoints you'd typically need** to implement each feature area. Exact "scopes" vary by endpoint; where we have explicit scope examples (Jobs Activities, Attachments, Messaging), they are included; where not, the reference indicates the endpoint exists but scope details were not captured in retrieved text, so marked **Unspecified**.

Feature area	Core objects	Key endpoints (examples)	Webhooks to subscribe to
Dispatch board job lists	Jobs, Clients, Staff	`GET /jobs`, `GET /clients`, `GET /staff` (listed in reference). [80]	`job.created`, `job.updated`, `job.status_changed` [188]
Calendar bookings & multi-staff	Job Activities (time), Jobs	Job Activities endpoints exist; creation and list endpoints are documented and include "Scope" in the endpoint spec (example: create job activity). [189]	`job.updated` (booking changes), `job.status_changed` [188]
Job allocations & windows	Allocation Windows, Job Allocations	`GET/POST/DEL /job_allocations`, `GET/POST/DEL /allocation_windows` (listed). [80]	`job.updated`, `job.status_changed` [188]
Queues	Job Queues	`GET/POST/DEL /job_queues` (listed). [80]	`job.queued` [188]
Badges	Badges	`GET/POST/DEL /badges` (listed). [80]	`job.badge_added`, `job.badge_removed` [188]

Feature area	Core objects	Key endpoints (examples)	Webhooks to subscribe to
Checklists	Job Checklists	`GET/POST/DEL /job_checklists` (listed). [80]	`job.updated` [188]
Job diary artefacts	Attachments, Notes	Attachments endpoints exist and include a "retrieve" endpoint that explicitly shows a scope example (`read_attachments`) in the endpoint documentation. [190] Notes endpoints listed. [80]	`job.note_added`, `job.photo_added`, `job.video_added` [188]
Billing items	Job Materials, Bundles	`GET/POST/DEL /job_materials`, `GET/POST/DEL /job_material_bundles`, `GET/POST/DEL /bundles`, `GET/POST/DEL /materials` (listed). [80]	`job.updated` [188]
Payments	Job Payments	`GET/POST/DEL /job_payments` (listed). [80]	`job.invoice_paid` [188]
SMS & email	Messaging API	`POST /sms`, `POST /email` (listed). The SMS endpoint has a dedicated reference doc (send_sms.md) including OpenAPI. [191]	`job.invoice_sent`, `job.quote_sent` (if using event webhooks) [188]
Email Inbox workflow	Inbox	Inbox endpoints include list, detail, mark read, archive, snooze, convert to job, attach to existing job, add note, create message. [80]	`inbox.message_received` [188]
Reporting exports	(Varies)	No dedicated "Reports" endpoints are listed in the API reference excerpt; treat as **Unspecified** for API-driven reporting exports. [80]	`job.completed`, `job.invoice_paid` etc for internal metrics. [188]

Sample payload shapes (descriptive, not runnable code)

Create Client (API behaviour notes) - The developer reference for creating clients notes that if no UUID is supplied, ServiceM8 generates one and returns it in the `x-record-uuid` response header. [192]

Send SMS (Messaging API) - A dedicated SMS endpoint exists (`POST /sms`) and is documented in the API reference. [191]

Webhook subscription payloads - Object webhook subscription expects `object`, `fields`, `callback_url`, optional `unique_id` (form-encoded). [187]
- Event webhook subscription expects `event`, `callback_url`, optional `unique_id`. [188]

Practical implementation plan for recreating ServiceM8 Premium Plus behaviour

Architecture overview

A faithful clone benefits from a modular architecture:

- **Web app (dispatch)**: Dispatch Board, Staff Schedules, Calendar, queues, job card (enhanced UI), admin/settings.
- **Mobile app (field)**: My Schedule/Jobs lists, job card actions bar, check in/out timers, photos/video capture, billing, payments. [193]
- **Core API**: Jobs, bookings/activities, allocations, queues, checklists, diary items, billing items, documents, payments, clients, staff. [80]
- **Automation engine**: rule evaluation + scheduling + cancellation mechanisms. [194]
- **Inbound capture**: Email Inbox ingestion, job-card auto-fill, PDF work order scanning, supplier invoice scanning. [195]
- **Integrations**: accounting sync adapters, Zapier-style triggers/actions, mail marketing sync, timesheet export. [196]

Suggested core data schema (entity relationships)

```

```

UI/UX components to build (high-fidelity)

Dispatch Board - Left rail: job lists (Action Required, Unscheduled, etc), queue folders. - Main pane toggles: Staff Schedules, Calendar, Queues board. - Drag-and-drop "job chips" onto schedule grid (with resize handles). [32]

Job card (Enhanced) - Tabbed: Details, Billing, Diary/Attachments/Photos (side-by-side). [64]
- Right-hand diary timeline with removal controls online. [71]
- Badge panel with immediate alerts (Burn List) and automation triggers. [157]
- Checklists area supporting assignment, reminders, linked forms/assets, reorder. [20]

Mobile job experience - Job Actions bar: configurable favourites, "More..." menu. [69]
- Checkout wizard constraints (checked-in + status Work Order). [197]
- Billing view with Add Item/Service, Smart Labour, and Add Payment. [198]

Priority roadmap (MVP → v1 → v2)

```
gantt
  title Roadmap for a ServiceM8-style rebuild
  dateFormat  YYYY-MM-DD
  axisFormat  %b %Y

  section MVP
  Core data model + auth          :a1, 2026-03-10, 30d
  Jobs + clients + staff CRUD     :a2, after a1, 30d
  Dispatch board (basic schedule) :a3, after a2, 45d
  Job card (details + diary)      :a4, after a2, 45d
  Basic invoicing + PDFs          :a5, after a4, 45d

  section v1
  Drag/drop reschedule + teams    :b1, after a3, 30d
  Queues + expiry + highlights    :b2, after a3, 30d
  Checklists (new model)          :b3, after a4, 30d
  Payments (Pay Now + on-site)    :b4, after a5, 45d
  Email inbox + convert to jobs   :b5, after a4, 45d

  section v2
  Job allocations + windows       :c1, after b1, 30d
  Bundles + partial invoicing     :c2, after a5, 45d
  Automation engine               :c3, after b5, 60d
  Job costing + markup billing    :c4, after c2, 45d
```

```
  Accounting integrations         :c5, after b4, 60d
  Advanced reporting              :c6, after c4, 45d
```

Feature priority chart (MVP vs later phases)

```
pie title Feature priority allocation
  "MVP (dispatch + job card + basic billing)" : 45
  "v1 (queues, checklists, payments, inbox)" : 35
  "v2 (allocations, automation, costing, integrations, advanced reporting)" :
20
```

Estimated effort per milestone

- **MVP**: High (core domain model + dispatch + robust job diary + PDF document engine).
- **v1**: High (mobile parity, payment flows, inbox ingestion introduce security/compliance burdens).
- **v2**: High (automation scheduling, profitability, accounting sync, and “platform” integrations compound complexity).

Testing checklist (practical and gritty)

- Scheduling:
- Drag/drop booking move; resize; overlaps allowed; multi-staff booking edits (remove/replace staff) and duration behaviour. [199]
- Queues:
- Expiry date logic; “Due for review” vs “Expired”; re-surfacing to Action Required/Unscheduled. [200]
- Job diary:
- Mobile deletion blocked; online deletion allowed; audit trace; edits vs version history for forms. [73]
- Billing:
- Quote options/versioning; Save to Diary; invoice date change; partial/progress totals. [201]
- Payments:
- Pay Now link; Scan & Pay QR flow; Tap to Pay device gating; reconciliation edges. [202]
- Inbound capture:
- Email → inbox message; auto-fill extraction; PDF work order scanning; supplier invoice scanning. [203]

Migration strategy (from an existing ServiceM8 tenant)

- Phase imports:
- **Clients** and contacts first (IDs + dedupe).
- **Materials & Services** (bulk import equivalents, preserve codes, archived status). [204]
- **Jobs** (status, diary artefacts, attachments; preserve “permanent record” semantics). [70]
- **Templates** and **forms** (as documents). [205]
- **Open invoices/payments** last, because accounting sync states can be brittle. [206]

Risks, mitigations, and operational runbook

Risks and mitigations

- **Diary integrity vs user correction needs**: ServiceM8 blocks deletion on mobile and requires online removal, reinforcing integrity. [70]
- Mitigation: implement role-based deletion + audit "tombstones" + retention.
- **Payments compliance and device fragmentation**: Tap to Pay requires specific iPhone hardware; Scan & Pay relies on QR + web page flows. [207]
- Mitigation: feature flags per device; strong idempotency and reconciliation logs.
- **Regional integration drift**: MYOB is region-specific and the connector is EOL. [143]
- Mitigation: integration adapters with region gating; treat legacy integrations as optional plugins.
- **Automation risk (spam, wrong timing, cancellations)**: ServiceM8 supports cancelling scheduled messages from job diary. [208]
- Mitigation: per-message cancel tokens + "scheduled message ledger" visible on job.
- **API/event consistency**: Build your clone around event webhooks (`job.*`, `inbox.message_received`, etc.). [188]
- Mitigation: use an event bus with retries and dedupe keys (`unique_id`). [209]

Operational runbook items

- **Backups**
- Nightly DB snapshot + hourly PITR; store encrypted; test restores monthly.
- **Webhook monitoring**
- Track delivery attempts, response codes, latency, and retry counts; alert on sustained 4xx/5xx. Use subscription listing endpoints to reconcile expected subscriptions. [210]
- **Error handling**
- Queue "dead letters" for PDF scans (work orders, supplier invoices). [211]
- **Support flows**
- Expose customer-visible "job audit" timeline and allow controlled removals online only, mirroring ServiceM8's guardrails. [70]
