ROLLO COMMAND CENTER — JOBS SCREEN COMPLETE BUILD SPEC

Date: 5 March 2026 **Purpose:** Feed directly into Claude Code for implementation in Next.js 14+ / React 18+ / TypeScript / Tailwind CSS **Source:** 75 screenshots of current build + ServiceM8 Premium Plus Technical Reference (24-page PDF) + Claude Code's live ServiceM8 browsing analysis (15 screenshots from Trevor's account, 4 March 2026) + Handover Document

---

DESIGN SYSTEM REMINDER

- Clean white/light grey backgrounds for light mode — BUT current build uses **dark theme** (screenshots confirm). Continue dark theme.
- Lucide icons only — NO emojis anywhere
- SF Pro / Inter font stack
- Subtle shadows, rounded corners (8–12px)
- Mobile-first responsive (sidebar collapses to bottom nav on mobile)
- Colour palette: Primary Blue #1D6AA9, Orange accent #ECA532, success green, warning amber, error red
- Status colours confirmed from screenshots: Blue = New Lead, Orange = Triaged, Teal/Cyan = Quoted, Green = Booked, Magenta/Pink = In Progress
- Must add: Completed (use success green with checkmark), Unsuccessful (use muted grey/red)

SECTION 1: KANBAN BOARD — GAPS AND FIXES

1.1 ADD COMPLETED AND UNSUCCESSFUL COLUMNS

Current state: 5 columns (New Lead, Triaged, Quoted, Booked, In Progress). **Required:** 7 columns total. ServiceM8 has 4 fixed statuses (Quote, Work Order, Completed, Unsuccessful). Rollo extends this with New Lead, Triaged, and In Progress as visual sub-states. But Completed and Unsuccessful must exist.

Implementation:

```typescript
```

```
type JobStatus =
  | 'new_lead'
  | 'triaged'
  | 'quoted'
  | 'booked'
  | 'in_progress'
  | 'completed'
  | 'unsuccessful';

const KANBAN_COLUMNS: { id: JobStatus; label: string; dotColour: string; count: number }[] = [
  { id: 'new_lead', label: 'NEW LEAD', dotColour: '#3B82F6' },       // blue
  { id: 'triaged', label: 'TRIAGED', dotColour: '#F59E0B' },        // orange/amber
  { id: 'quoted', label: 'QUOTED', dotColour: '#06B6D4' },          // cyan/teal
  { id: 'booked', label: 'BOOKED', dotColour: '#22C55E' },          // green
  { id: 'in_progress', label: 'IN PROGRESS', dotColour: '#EC4899' }, // pink/magenta
  { id: 'completed', label: 'COMPLETED', dotColour: '#10B981' },     // emerald green
  { id: 'unsuccessful', label: 'UNSUCCESSFUL', dotColour: '#6B7280' }, // grey
];
```

UX notes:

- Completed column should show jobs for 48 hours only (per ServiceM8 — completed jobs visible for 48h then archived to history).
- Unsuccessful column shows all unsuccessful jobs (ServiceM8 retains these indefinitely for client contact reuse).
- Both columns should be collapsible/hideable via a toggle so the board doesn't get too wide by default.
- Add a "Show Completed/Unsuccessful" toggle above the Kanban, defaulting to hidden.

1.2 ADD DRAG-AND-DROP BETWEEN KANBAN COLUMNS

Current state: No drag-and-drop indicators visible on Kanban cards. **Required:** Cards must be draggable between columns to change job status.

Implementation:

- Use `@dnd-kit/core` + `@dnd-kit/sortable` (already likely in project for dispatch grid drag).
- Each Kanban column is a `DroppableContainer`.
- Each card is a `DraggableItem`.
- On drop: update job status to match the target column's status.
- Visual feedback: ghost card during drag, column highlight on hover, drop zone indicator.
- Restrict certain transitions: e.g., cannot drag from Completed back to New Lead without confirmation modal.

Status transition rules (enforce on drop):

- New Lead → Triaged, Quoted, Booked, Unsuccessful (any forward + unsuccessful)
- Triaged → Quoted, Booked, In Progress, Unsuccessful
- Quoted → Booked, In Progress, Unsuccessful (quote accepted = becomes Booked/In Progress)
- Booked → In Progress, Unsuccessful
- In Progress → Completed, Unsuccessful
- Completed → (no forward moves; allow reopen to In Progress with confirmation)
- Unsuccessful → (allow reopen to New Lead with confirmation)

1.3 ADD STATUS INDICATOR DOTS ON KANBAN CARDS

Current state: No ServiceM8-style status dots on cards. **Required:** Three dot types per ServiceM8:

```typescript
type JobIndicator = 'unread' | 'needs_review' | 'queued' | 'expired' | 'action_required' | null;

// Blue dot — job scheduled but assigned engineer hasn't opened it
// Red dot — staff needs to review; job not completed after scheduled appointment
// Yellow dot — job is in a queue or has expired from a queue
```

Implementation:

- Add a small coloured dot (8px circle) to the top-left corner of each Kanban card.
- Blue dot: `bg-blue-500` — when job has a booking but `engineer_viewed === false`.
- Red dot: `bg-red-500` — when past booking exists but job not completed/rescheduled/queued.
- Yellow dot: `bg-yellow-500` — when job is in a queue. On hover, show tooltip: "{queue_name} · Expires {expiry_date}".

1.4 ADD BADGE INDICATORS ON KANBAN CARDS

Current state: No badge display on Kanban cards. **Required:** ServiceM8 shows badge icons on job cards. Badges are visual indicators AND functional triggers.

Badge types to implement:

```typescript
```

```typescript
type BadgeCategory = 'information' | 'form' | 'automation' | 'follow_up' | 'asset';

interface JobBadge {
  uuid: string;
  name: string;
  category: BadgeCategory;
  colour: string; // hex
  icon: string; // Lucide icon name
  is_active: boolean;
}
```

Pre-built badges for 24 Hour Plumber:

- VIP Customer (information, gold)
- Bad Payer / Burn List (information, red) — triggers alert on new job creation for this client
- Booking Reminder (automation, blue) — arms the booking reminder automation
- RGI Gas Safety Form (form, green) — makes gas safety form mandatory at checkout
- Follow-Up Required (follow_up, purple)
- Boiler Service Due (asset, orange)

Display on Kanban cards: Show up to 3 badge icons (small 16px circles) below the customer name. If more than 3, show "+N" overflow.

Display on job detail panel: Full badge panel below the urgency/division pills. Each badge is a toggle switch. Toggling on arms the badge's associated behaviour.

1.5 ADD JOB CATEGORY TO KANBAN CARDS

Current state: Cards show division (Heating/Plumbing/Gas Safety/Electrical) but not category. **Required:** ServiceM8 has a separate "Job Category" field (After-Hours, Standard, VIP, Warranty, custom).

Implementation:

- Add a `category` field to the Job type.
- Default categories: `Standard`, `After-Hours`, `VIP`, `Warranty`, `Insurance`, `Service Plan`.
- Display as a small text label on the Kanban card, below the location line.
- Configurable at Settings → Job Categories.

1.6 ADD FILTERING TO KANBAN VIEW

Current state: No filtering controls visible. **Required:** ServiceM8's dispatch board has filter dropdowns. Kanban needs similar.

Filter bar (below the Kanban/List/Calendar toggle):

- Status filter: multi-select dropdown (all statuses)
- Engineer filter: multi-select dropdown (all engineers + "Unassigned")
- Urgency filter: toggle buttons (Emergency / Urgent / Standard / All)
- Division filter: multi-select dropdown (Plumbing, Heating, Gas Safety, Electrical, All)
- Area filter: dropdown (Dublin, Meath, Kildare, Louth, Wicklow, All)
- Date range: date picker (from/to)
- "Clear Filters" button

SECTION 2: JOB DETAIL SLIDE-OVER PANEL — GAPS AND FIXES

2.1 DETAILS TAB — MISSING FIELDS

Add these fields to the Details tab, in this order (top to bottom):

1. **STATUS** — already present ✓
2. **ENGINEER ASSIGNED** — already present for Triaged+ jobs ✓
   - For New Lead jobs: add an "Assign Engineer" dropdown button here
3. **DESCRIPTION** — already present ✓
4. **JOB CATEGORY** — NEW. Dropdown field.

```typescript
categories: string[] = ['Standard', 'After-Hours', 'VIP', 'Warranty', 'Insurance', 'Service Plan'];
```

5. **PO NUMBER** — already present ✓
6. **BILLING CONTACT** — NEW. ServiceM8 allows a separate billing contact different from job contact.
   - "Same as job contact" checkbox (default checked)
   - When unchecked: shows Name, Email, Phone fields for billing contact
7. **BADGES** — NEW. Full badge panel.
   - Display all available badges as toggle switches
   - Active badges shown as coloured pills; inactive as grey outlines
   - Toggling a badge on/off updates the job's badge array
   - API constraint reminder: badge updates replace the entire array (not additive)
8. **CHECKLIST** — already present ✓
   - ADD: staff assignment per checklist item (small avatar dropdown on hover)

- ADD: reminder dropdown per item (Navigate to Job, Check In, Check Out, Today, Tomorrow, Monday, custom date/time)
- ADD: link Form or Asset as checklist item (search input within checklist)
- ADD: drag-and-drop reorder of checklist items

9. **NOTES** — already present ✓
10. **PHOTOS** — already present as placeholder ✓
    - ADD: photo upload button (click to upload or drag-drop)
    - ADD: photo grid display with lightbox on click
    - ADD: photo delete (online only, not from mobile — per ServiceM8 diary rules)

2.2 DETAILS TAB — SCHEDULING CONTROLS

Current state: No scheduling controls in the job detail panel. **Required:** ServiceM8 has a "Schedule" button in the job card top bar.

Add to the panel header (next to the X close button):

- Row of action buttons: [Email] | [SMS] | [Schedule] | [More ▾]
- **Schedule button** opens a smart booking dialog:
  - Staff dropdown (with availability indicators)
  - Date picker
  - Time picker
  - Duration dropdown (30min, 1hr, 1.5hr, 2hr, 3hr, 4hr, custom)
  - "Allocate" toggle — when on, shows Allocation Window dropdown instead of exact time:
    - Urgent (top priority)
    - Morning (07:00–12:00)
    - Afternoon (12:00–17:00)
    - Anytime
    - Custom windows (from Settings → Allocation Windows)
  - Expiry date field (for allocations)
  - "Book" / "Allocate" button

2.3 BILLING TAB — MISSING FEATURES

Current state from screenshots: Search bar, Material line (Code/Qty/Price), + Add Material, Labour section (Description/Hr/Rate), + Add Labour, Totals box (Materials/Labour/Subtotal/VAT/Total/Paid/Balance Due), Add Payment button, Email Invoice + SMS Invoice buttons.

Add these features:

1. **WORK COMPLETED DESCRIPTION** — NEW. Large textarea at the top of the Billing tab.
    - This appears on the customer-facing invoice.
    - Separate from the internal job description on Details tab.
2. **ITEM CODES** — UPDATE material line items.

```typescript
interface BillingLineItem {
  item_code: string;      // alphanumeric, e.g., "BOILER-001"
  item_name: string;      // e.g., "Vaillant ecoTEC plus 832"
  quantity: number;
  cost_inc_tax: number;   // purchase cost (for markup/profit calc)
  markup_percent: number; // markup % (Markup Billing add-on)
  price_inc_tax: number;  // selling price
  total_inc_tax: number;  // qty × price
  is_labour: boolean;     // true if item_name contains "labour"/"labor"
  material_uuid: string;  // FK to catalogue
  bundle_uuid?: string;   // FK to bundle (if part of bundle)
}
```

3. **"SEARCH OR ADD NEW" AUTOCOMPLETE** — UPDATE the existing search bar.
    - Typing in the search bar queries the Materials & Services catalogue.
    - If no match, option to "Add as new item" which saves to catalogue for future use.
    - Show item_code + item_name + price in dropdown results.
4. **BUNDLES SUPPORT** — NEW.
    - Add "Add Bundle" button next to "Add Material".
    - Bundle dropdown shows pre-configured bundles.
    - When a bundle is added: customer sees bundle name + total price only; components are hidden.
    - Internally, components still contribute to profit calculations.
5. **MARKUP BILLING COLUMNS** — NEW.
    - Add "Cost" and "Markup %" columns to the materials table.
    - When Markup Billing is active: editing cost or markup auto-calculates selling price.
    - Formula: price = cost × (1 + markup/100).
6. **SMART LABOUR CONVERSION** — NEW.
    - When a job has check-in/check-out time recorded:
    - Show "Convert to Labour" button in the Labour section.
    - Click opens: select labour rate item, choose rounding (15/30/60 min), include/exclude travel time.

- Auto-creates a labour line item from recorded time.

7. **SAME AS JOB ADDRESS CHECKBOX** — NEW.
    - Add "Billing Address" field with "Same as job address" checkbox (default checked).
    - When unchecked, shows editable address fields.
8. **QUOTE VERSIONING** — NEW.
    - Add "Save as Quote Version" button.
    - Each save creates a snapshot (price, items, work completed description).
    - Version history accessible via dropdown: "v1 (28 Feb) | v2 (1 Mar) | v3 (3 Mar)".
    - "Restore Version" button on each.
    - Multiple quote options: "Add Quote Option" creates a separate pricing variant.
9. **PARTIAL / PROGRESS INVOICING** — NEW.
    - Add "New Partial Invoice" option in a dropdown next to "Email Invoice".
    - Shows checkboxes next to each line item.
    - User ticks items to include in this partial invoice.
    - Creates an invoice snapshot for just those items.
    - Tracks invoiced vs remaining quantities.
10. **DEPOSIT SUPPORT** — NEW.
    - Add "Add Deposit" button.
    - Creates a negative line item (e.g., "Deposit — -1 × €100.00 = -€100.00") per ServiceM8 pattern.
    - Or configurable global deposit % (Settings → Preferences).
11. **SUPPLIER INVOICE IMPORT** — NEW.
    - Add "Attach Supplier Invoice" button.
    - Upload PDF → system extracts total/line items.
    - Three modes: Apply Total, Apply Line Items, Apply Bundle.
    - Attached to job for cost tracking.
12. **APPROVE INVOICE TOGGLE** — NEW.
    - Add "Approve Invoice" checkbox/button.
    - When approved: triggers accounting sync (Xero/QuickBooks).
    - Invoice moves from "Awaiting Approval" to "Awaiting Payment".
13. **PAYMENT METHOD SELECTION** — UPDATE Add Payment.
    - Currently just a green button.
    - Add Payment should open a modal with:
        - Amount field (pre-filled with Balance Due)

    - Method dropdown: Cash, Card (VISA), Card (Mastercard), Card (AMEX), Bank Transfer, PayPal, Cheque
    - Reference field (e.g., "BT-8834")
    - Date picker (default today)
    - "Record Payment" button
  - For future: ServiceM8 Pay / Stripe integration (Pay Now link, Tap to Pay, Scan & Pay QR).

14. **JOB COSTING FOOTER** — PARTIALLY PRESENT.
    - Screenshots show "10.0h Job Time · 3 min Admin Time · €922.50 Est. Profit" on some jobs.
    - Make this always visible when billing has data.
    - Add GP% calculation: `GP% = Profit / Selling Price × 100`.
    - Add Materials vs Labour breakdown in the profit tooltip.

2.4 ACTIVITY TAB — MISSING FEATURES

Current state: Vertical timeline with entries showing: title, badge pill (Enquiry/Status Change/Quote/Booking/Note), agent name, description, relative timestamp.

Add these features:

1. **COLOUR-CODED ENTRY TYPE ICONS** — UPDATE. Per ServiceM8 and Claude Code's live analysis:

```typescript
const ACTIVITY_ICONS: Record<string, { icon: string; colour: string }> = {
  enquiry: { icon: 'Phone', colour: '#22C55E' },         // green
  status_change: { icon: 'ArrowRightLeft', colour: '#3B82F6' }, // blue
  booking: { icon: 'Calendar', colour: '#EF4444' },       // red
  note: { icon: 'StickyNote', colour: '#F59E0B' },        // yellow/amber
  quote: { icon: 'FileText', colour: '#6366F1' },         // indigo
  invoice: { icon: 'Receipt', colour: '#8B5CF6' },        // purple
  payment: { icon: 'CreditCard', colour: '#10B981' },     // emerald
  sms: { icon: 'MessageSquare', colour: '#06B6D4' },      // cyan
  email: { icon: 'Mail', colour: '#0EA5E9' },             // sky blue
  photo: { icon: 'Camera', colour: '#22C55E' },           // green
  form: { icon: 'ClipboardCheck', colour: '#14B8A6' },    // teal
  system: { icon: 'Cpu', colour: '#6B7280' },             // grey
  checkin: { icon: 'MapPin', colour: '#F97316' },         // orange
  checkout: { icon: 'LogOut', colour: '#F97316' },        // orange
};
```

2. **"ADD NOTE" BUTTON** — NEW.

- At the top of the Activity tab: "Type a job note here..." input with attachment button (per ServiceM8 pattern).
- Pressing Enter or clicking Send adds the note to the timeline.
- Notes should record: who wrote it, timestamp, content.

3. **NOTE EDITING** — NEW.
    - On hover over a note entry: show a "⋯" menu with "Edit" and "Remove" options.
    - Edit opens the note text as an editable field inline.
    - Remove asks for confirmation, then soft-deletes (marks as removed, retains audit trail).
4. **DIARY DELETION CONTROLS** — NEW.
    - Only available on the online dashboard (not mobile).
    - Hover over any diary item → dropdown → "Remove".
    - Photos/videos: hover → "Delete" with confirmation.
    - Audit: record who deleted and when.
5. **SMS/EMAIL ENTRIES** — NEW.
    - When an SMS or email is sent from the job (via Comms tab or inline), log it as an activity entry.
    - Show: "SMS sent to {customer_name}" with the message preview truncated.
    - Show: "Email sent: {subject}" with delivery status.
6. **PHOTO/VIDEO ENTRIES** — NEW.
    - Photos added to the job appear as thumbnail entries in the timeline.
    - Click thumbnail to open lightbox.
7. **FORM COMPLETION ENTRIES** — NEW.
    - When a form (e.g., Gas Safety Certificate) is completed, log it.
    - Show: "Form completed: {form_name}" with a "View PDF" link.
8. **FILTER BUTTON** — NEW.
    - Per ServiceM8: add a filter dropdown on the Activity tab.
    - Filter by entry type: All, Notes, Bookings, Photos, SMS, Emails, Status Changes, Payments.

2.5 JOB DETAIL PANEL HEADER — UPDATES

Current header from screenshots:

- Job number + status badge
- Service icon + "Division · Job Type"
- Customer name, phone, email, address
- Urgency pill + Division pill + date + (value on some jobs)

- Close X button

Add to header:

1. **ACTION BUTTONS ROW** — below the badges/pills line:
   - Phone (click-to-call via Nuacom)
   - SMS (opens SMS compose)
   - Email (opens email compose)
   - Schedule (opens booking dialog — see 2.2)
   - Print (dropdown: Print Work Order, Print Invoice)
   - More ▾ (dropdown: Mark as Completed, Mark as Unsuccessful, Duplicate Job, Delete Job)
2. **QUOTE ACCEPTANCE CONTROLS** — for Quoted status jobs:
   - "Send Quote" button (emails quote PDF with acceptance link)
   - "Mark as Accepted" button (manually triggers Quote → Work Order/Booked transition)
   - When client accepts online: auto-status change fires, logged in Activity.

SECTION 3: LIST VIEW — GAPS AND FIXES

3.1 ADD FILTERING

Same filter bar as Kanban (Section 1.6). Shared component.

3.2 ADD COLUMN-LEVEL SORTING INDICATORS

Current state: Column headers show sort arrows (✓ from screenshots). Sorting works. **Verify:** Ensure all columns are sortable: Job, Customer, Type, Area, Scheduled, Engineer, Status, Urgency, Value.

3.3 ADD MULTI-SELECT / BULK ACTIONS

- Add checkboxes on each row (left side).
- When 1+ rows selected, show bulk action bar:
  - "Assign to Engineer" dropdown
  - "Change Status" dropdown
  - "Add to Queue" dropdown
  - "Send SMS" button
  - "Export Selected" button

3.4 ADD PAGINATION / VIRTUAL SCROLL

- Currently 15 jobs fit on screen.

- At scale (1500+ jobs/month per ServiceM8 Premium Plus): need pagination or virtual scroll.
- Add "Showing 1–15 of 247 jobs" footer with page controls.

3.5 ADD COMPLETED / UNSUCCESSFUL ROWS

- List view must show Completed and Unsuccessful jobs when filters allow.
- Default filter: show active jobs only (exclude Completed/Unsuccessful).
- Toggle: "Show Completed" and "Show Unsuccessful" checkboxes.

SECTION 4: CALENDAR VIEW — GAPS AND FIXES

4.1 ADD DAY VIEW

Current state: Week and Month views only. **Required:** ServiceM8 supports Day, Week, 2 Weeks, Month.

- Day view: vertical time axis (07:00–21:00), one column, all jobs for that day stacked.
- 2-Week view: same as Week but showing 14 days.
- Add view toggle buttons: `Day | Week | 2 Weeks | Month`.

4.2 ADD STAFF-GROUPED VIEW

Current state: Calendar is date-grouped (days as columns). **Required:** ServiceM8's "Staff Schedules" shows one row per engineer (Gantt-style).

- Add a "By Staff" toggle next to the Week/Month toggle.
- When active: Y-axis = staff members, X-axis = time, job blocks placed on staff row at scheduled time.
- This mirrors the Dispatch grid but within the Calendar view on the Jobs page.

4.3 ADD DRAG-AND-DROP RESCHEDULING

- Drag a job card from one day/time to another.
- Updates the booking date/time.
- On the Week view: drag between day columns.
- On the Day view: drag to a different time slot.
- Confirmation toast: "Job #19448 rescheduled to Wed 4 Mar at 10:00".

4.4 ADD CLICK-TO-CREATE BOOKING

- Clicking an empty time slot on the calendar opens the New Job dialog or a quick-book dialog.
- Quick-book: pre-fills the date/time, asks for customer + job type.

4.5 ADD LEAVE BLOCKS

- Show staff leave as grey blocked-out areas on the calendar (especially in Staff Schedules / By Staff view).
- Leave does NOT prevent manual scheduling (per ServiceM8 — display only).
- Leave entries come from Settings → Staff → Leave.

4.6 ENRICH CALENDAR CARDS

- Currently showing: status dot, time, customer name, job type, engineer avatar.
- Add: value (if quoted/billed), location, urgency indicator.

SECTION 5: DISPATCH PAGE — GAPS AND FIXES

5.1 DRAG-AND-DROP — THREE TARGETS

Current state: Claude Code's analysis says dispatch drag-drop was built. Verify these three ServiceM8 drag targets work:

1. **Drag to time slot on grid** → Creates a Scheduled Booking (exact date/time). Job snaps into place as coloured block.
2. **Drag to staff member's header (not a time slot)** → Creates a Job Allocation with booking window popup (Urgent/Morning/Afternoon/Anytime + expiry date).
3. **Drag to queue pill** → Moves job into that queue with expiry date prompt.

5.2 ALLOCATION WINDOWS

Current state: Unscheduled sidebar has "Schedule" button but no allocation window UI. **Required:**

```typescript
```

```
interface AllocationWindow {
  uuid: string;
  name: string;        // "Urgent", "Morning", "Afternoon", "Anytime"
  start_time: string;  // "07:00"
  end_time: string;    // "12:00"
  priority: number;    // 1=Urgent (top), 5=Anytime (bottom)
  active: boolean;
}

interface JobAllocation {
  uuid: string;
  job_uuid: string;
  staff_uuid: string;
  allocation_window_uuid: string;
  start_date: string;       // YYYY-MM-DD
  expiry_date: string;      // YYYY-MM-DD
  estimated_duration?: number; // minutes
  active: boolean;
}
```

- When dragging to staff header: popup with fields for Booking Window (dropdown), Estimated Duration, Start Date, Expiry Date, optional message to engineer.
- Allocated (non-time-specific) jobs show as a separate list under the staff member's scheduled bookings, or as hatched/dashed blocks.

5.3 QUEUE MANAGEMENT

Current state: Queue pills show at top of Dispatch with counts (Customer Requires 2, Jobs to Quote 3, Order Parts 1, Pending Quotes 2, Waiting on Client 2, Waiting on Parts 2). Good.

Add:

1. **Click on queue pill** → Opens a dropdown/panel showing all jobs in that queue with:
    - Job number, customer name, job type
    - Expiry date (with "Due for Review" / "Expired" indicator)
    - "Remove from Queue" button
    - "Reschedule" button
2. **Drag job to queue pill** → Opens expiry date prompt (pre-filled from queue default).
3. **Queue expiry logic:**
    - When expiry date passes: job auto-resurfaces to Unscheduled list + Action Required indicator.
    - "Due for Review" = approaching expiry (within 24 hours).
    - "Expired" = past expiry date.

    - Yellow dot appears on job card.

4. **Queue configuration** (Settings → Job Queues):
    - Regular queues (blue) — external dependencies.
    - Assignable queues (orange) — internal staff action, default staff member, shorter expiry.

```typescript
interface JobQueue {
  uuid: string;
  name: string;
  type: 'regular' | 'assignable';
  colour: 'blue' | 'orange';
  default_timeframe_days: number;
  default_staff_uuid?: string; // only for assignable queues
  active: boolean;
}
```

5.4 BOOKING RESIZE HANDLES

- Job blocks on the dispatch grid should have a resize handle on the bottom edge.
- Dragging the handle up/down changes the booking duration.
- Minimum duration: 30 minutes.

5.5 DISPATCH MAP VIEW

Current state: Grid/List/Map toggle visible but Map not shown in screenshots. **Required:** ServiceM8 has a Dispatch Map with:

- Map (use Google Maps API with Eircode geocoding)
- Job pins colour-coded by status
- Engineer location pins (GPS)
- Route lines between sequential jobs
- Click pin → job summary popup
- Cluster pins for dense areas

5.6 STAFF LEAVE DISPLAY

- Show staff leave as grey/hatched blocks on the grid.
- Leave title shown on hover.
- Does NOT prevent manual scheduling over leave (per ServiceM8).

5.7 ETA / TRACK MY ARRIVAL

- For In Progress jobs where engineer is navigating:
- Show green line on dispatch map from engineer to job location.
- Show ETA on the staff column header.
- "Track My Arrival" SMS sends a link to the customer showing live engineer location.

5.8 HIDE OFFICE STAFF FROM GRID

- Pamela currently shows as a column on the dispatch grid. She is office staff, not a field engineer.
- Add a "Field Engineers Only" toggle (default on) that hides non-field staff from the scheduling grid.
- Staff type should be configurable: `role: 'field_engineer' | 'office_staff' | 'manager'`.

SECTION 6: NEW JOB DIALOG — GAPS AND FIXES

6.1 CUSTOMER SEARCH / AUTOCOMPLETE

Current state: Field says "Start typing customer name..." but no autocomplete shown. **Required:** As user types, query the 12,500+ customer database. Show dropdown with matching customers (name, address, phone). Selecting a customer auto-fills Phone, Email, Address fields.

6.2 ADD MISSING FIELDS

1. **JOB CATEGORY** — dropdown (Standard, After-Hours, VIP, Warranty, Insurance, Service Plan).
2. **INITIAL STATUS** — radio buttons: "Quote" or "Work Order". Default: Work Order. Per ServiceM8: every job starts as either Quote or Work Order.
3. **BADGES** — quick-apply section. Show most common badges as toggleable pills.
4. **JOB TEMPLATE** — dropdown. Selecting a template pre-fills: description, checklist items, category, badges. Templates configured at Settings → Job Templates.

6.3 EIRCODE AUTO-AREA

- When an Eircode is entered: auto-select the Area dropdown based on the Eircode routing key.
- Use Trevor's existing Eircode routing key mapping (139 keys with townland/population data).

SECTION 7: SEARCH — GAPS AND FIXES

7.1 SEARCH RESULTS DISPLAY

Current state: Search bar accepts input but no results dropdown shown. **Required:**

- On typing (debounced 300ms): show a dropdown below the search bar.
- Search across: job numbers, customer names, addresses, job types, descriptions.
- Results grouped by type:

```
JOBS
#19448 — Declan Byrne · No Heat/No Hot Water · Malahide
#19440 — Colm Murphy · Boiler Service · Dundrum

CUSTOMERS
Colm Murphy · 087 654 3210 · Dundrum

INVOICES
INV-2026-041 — Seamus Doyle · €3,200.00
```

- Click a result → opens that job/customer/invoice detail panel.
- Press Enter → navigates to a full search results page.

SECTION 8: MOBILE VIEWS — GAPS AND FIXES

8.1 JOB DETAIL ON MOBILE

- Tapping a job card on mobile should open a **full-screen detail view** (not a panel).
- Same three tabs (Details, Billing, Activity).
- Bottom action bar: Phone, SMS, Email, Camera, Notes, More.

8.2 CHECK-IN / CHECK-OUT FLOW (MOBILE-FIRST)

This is a critical missing feature. ServiceM8's entire field workflow depends on this.

```typescript
```

```typescript
type CheckInState = 'not_started' | 'navigating' | 'on_site' | 'checked_out';

interface JobCheckIn {
  job_uuid: string;
  engineer_uuid: string;
  state: CheckInState;
  navigation_started_at?: string;  // ISO datetime
  arrived_at?: string;             // ISO datetime + GPS coords
  checked_out_at?: string;         // ISO datetime
  travel_time_minutes?: number;
  job_time_minutes?: number;
  gps_lat?: number;
  gps_lng?: number;
}
```

Mobile flow:

1. Engineer taps "Start Job" on their assigned job.
2. Options: "Navigate to Job" (opens maps, logs travel, sends "on the way" SMS) or "Skip Navigation".
3. On arrival: tap "Arrived" → starts job timer, logs GPS coordinates.
4. During job: complete checklist items, take photos, fill forms, add notes.
5. Tap "Check Out" → Checkout Wizard:
    - Step 1: "Job Complete" or "Not Complete"
    - Step 2: Add optional diary notes
    - Step 3: Billing screen — verify materials/services, enter work-completed description
    - Step 4: Payment collection (Cash, Card, Bank Transfer, or "Invoice Later")
    - Step 5: Toggle "Approve Invoice" for immediate accounting sync
    - Step 6: Send invoice via SMS or Email
6. On completion: job status auto-changes to Completed.

8.3 CAMERA / PHOTO CAPTURE

- Add camera button to mobile job action bar.
- Takes photo → automatically saves to job diary.
- Photos tagged with timestamp and GPS.

SECTION 9: CROSS-CUTTING FEATURES

9.1 ACTION REQUIRED LIST LOGIC

A job surfaces to "Action Required" when ANY of these conditions are true:

1. It has no future booking AND was not placed in a queue.
2. A past booking exists but the job was neither completed, rescheduled, nor queued afterward.
3. A job has expired out of a queue without further action.
4. An unanswered client email or SMS reply exists on the job.

Resolving any condition (scheduling, queuing, completing, dismissing) removes the job.

Display: Show an "Action Required" count badge on the Jobs sidebar tab. On Kanban, show a red "IMMEDIATE ACTION REQUIRED" label on affected cards (already implemented for #19449 — extend to all matching jobs).

9.2 SUGGESTED TEAMS

- ServiceM8 learns which staff are frequently booked together.
- Over time, show "Suggested Teams" at the bottom of the staff selection dropdown in the booking dialog.
- Track co-booking frequency: `{ staff_a: string, staff_b: string, count: number }`.

9.3 RECURRING JOBS

- Add support for recurring job rules.
- Recurring Jobs tab in Dispatch (already in ServiceM8 dispatch board tabs).
- Rule: "Every 12 months from last service date" or "First Monday of every month" or custom.
- Auto-creates job instances when due.
- Follow-up badge system arms reminders before the next service.

9.4 CUSTOMER FEEDBACK

- After payment: optionally send a feedback request.
- Customer clicks link → 5-star rating + 160-char review.
- If 4+ stars: redirect to Google Reviews.
- 30-day cooldown for regular clients.
- `{feedback}` merge field creates a job-specific smart link.

9.5 TRACK MY ARRIVAL

- When engineer taps "Navigate to Job":
- "On the way" SMS sent to customer with ETA + tracking link.

- Customer sees live map of engineer's vehicle moving towards them.
- Tracking deactivates on arrival.
- Office sees ETA on Staff Schedules + green line on Dispatch Map.

SECTION 10: DATA MODEL ADDITIONS

10.1 NEW FIELDS ON JOB ENTITY

```typescript
```

```typescript
interface Job {
  // Existing fields
  uuid: string;
  job_number: string;        // auto-generated, prefix configurable
  customer_uuid: string;
  status: JobStatus;
  description: string;
  address: string;
  eircode: string;
  division: 'plumbing' | 'heating' | 'gas_safety' | 'electrical';
  job_type: string;          // "No Heat/No Hot Water", "Boiler Install", etc.
  urgency: 'emergency' | 'urgent' | 'standard';
  area: string;              // "Dublin", "Meath", etc.
  engineer_uuid: string | null;
  scheduled_date: string | null;
  scheduled_time: string | null;
  value: number | null;
  created_at: string;
  updated_at: string;
  active: boolean;           // soft-delete flag (0/1 pattern)

  // NEW fields
  category: string;          // "Standard", "After-Hours", "VIP", etc.
  po_number: string | null;
  billing_contact_uuid: string | null; // separate billing contact
  billing_address: string | null;
  billing_address_same_as_job: boolean;
  badges: string[];          // array of badge UUIDs
  queue_uuid: string | null;  // FK to JobQueue (nullable)
  queue_expiry_date: string | null;
  work_completed_description: string | null;
  check_in_state: CheckInState;
  engineer_viewed: boolean;   // for "unread" blue dot
  quote_version: number;      // current quote version
  initial_type: 'quote' | 'work_order'; // how job was created
  recurring_rule_uuid: string | null;
  feedback_uuid: string | null;
  estimated_profit: number | null;
  job_time_seconds: number;
  admin_time_seconds: number;
}
```

10.2 NEW ENTITIES

```typescript
```

```typescript
// Job Queue
interface JobQueue {
  uuid: string;
  name: string;
  type: 'regular' | 'assignable';
  default_timeframe_days: number;
  default_staff_uuid: string | null;
  active: boolean;
}

// Job Badge (catalogue)
interface Badge {
  uuid: string;
  name: string;
  category: 'information' | 'form' | 'automation' | 'follow_up' | 'asset';
  colour: string;
  icon: string;
  linked_form_uuid: string | null;
  linked_automation_uuid: string | null;
  active: boolean;
}

// Allocation Window
interface AllocationWindow {
  uuid: string;
  name: string;
  start_time: string;
  end_time: string;
  priority: number;
  active: boolean;
}

// Job Allocation
interface JobAllocation {
  uuid: string;
  job_uuid: string;
  staff_uuid: string;
  allocation_window_uuid: string;
  start_date: string;
  expiry_date: string;
  estimated_duration_minutes: number | null;
  active: boolean;
}

// Quote Version
interface QuoteVersion {
```

```
  uuid: string;
  job_uuid: string;
  version_number: number;
  items: BillingLineItem[];
  work_completed_description: string;
  total: number;
  created_at: string;
}

// Job Check-In Session
interface JobCheckInSession {
  uuid: string;
  job_uuid: string;
  staff_uuid: string;
  state: CheckInState;
  navigation_started_at: string | null;
  arrived_at: string | null;
  arrived_lat: number | null;
  arrived_lng: number | null;
  checked_out_at: string | null;
  travel_time_seconds: number | null;
  job_time_seconds: number | null;
}

// Staff Leave
interface StaffLeave {
  uuid: string;
  staff_uuid: string;
  start_date: string;
  end_date: string;
  label: string;
  recurrence_rule: string | null; // e.g., "Every Thursday and Friday"
  active: boolean;
}

// Feedback
interface Feedback {
  uuid: string;
  job_uuid: string;
  rating: number; // 1-5
  review: string; // max 160 chars
  created_at: string;
  redirected_to_google: boolean;
}
```

SECTION 11: SAMPLE DATA REQUIREMENTS

All sample data must use:

- Irish names (first and last)
- Dublin/Meath/Kildare/Louth/Wicklow addresses
- Valid Eircode format (e.g., D14 YH62, A92 P6T8, C15 WX34)
- Irish mobile numbers (083/085/086/087 format)
- Euro (€) currency
- 23% VAT rate
- Realistic plumbing/heating/gas safety/electrical job descriptions
- Engineers: Trevor, Paula, Pamela (office), Darren, Jonathan, Lucas, Thomas + any others from screenshots
- Realistic billing: materials at Irish trade prices, labour at €65–€75/hr

---

SECTION 12: BUILD PRIORITY ORDER

Phase 1 — CRITICAL (Build Now)

1. Completed + Unsuccessful Kanban columns (with 48h visibility + toggle)
2. Drag-and-drop on Kanban between columns
3. Search results dropdown
4. Filtering on Kanban + List views
5. Badge system (catalogue + job-level toggle + Kanban display)
6. Job category field on detail panel + New Job dialog
7. Action buttons row on job detail header (Phone/SMS/Email/Schedule/More)
8. Schedule button → booking dialog with allocation window support
9. Activity tab: Add Note input, colour-coded icons, edit/delete controls, filter
10. Billing: Work Completed field, item codes, Search or Add New autocomplete
11. Payment method selection modal
12. Quote acceptance flow (Send Quote + Mark as Accepted)

Phase 2 — IMPORTANT (Build Next)

13. Day view + 2-Week view on calendar
14. Staff-grouped calendar view (By Staff toggle)
15. Calendar drag-and-drop rescheduling
16. Queue management (click queue pill → job list, drag to queue, expiry logic)

17. Allocation windows (drag to staff header → allocation popup)
18. Booking resize handles on dispatch grid
19. Staff leave display on dispatch + calendar
20. Dispatch Map view (Google Maps + Eircode pins + engineer GPS)
21. Smart Labour conversion (time → invoice)
22. Markup Billing columns (Cost + Markup %)
23. Bundle support in billing
24. Quote versioning (save/restore versions)
25. Partial/Progress Invoicing
26. Multi-select + bulk actions on List view
27. Pagination / virtual scroll on List view
28. Billing Contact (separate from job contact)
29. Customer search autocomplete on New Job dialog
30. Initial status choice (Quote vs Work Order) on New Job
31. Job Templates dropdown on New Job

Phase 3 — ENHANCEMENT (Build Later)

32. Check-in / Check-out mobile flow (Start Job → Navigate → Arrived → Check Out wizard)
33. Track My Arrival (live engineer tracking + SMS link)
34. Photo upload + grid display + lightbox
35. Recurring Jobs support
36. Customer Feedback (star ratings + Google redirect)
37. Suggested Teams
38. Supplier Invoice Import
39. Deposit support
40. Approve Invoice toggle (accounting sync trigger)
41. Eircode auto-area mapping on New Job
42. Action Required list logic (auto-surfacing)
43. SMS/Email entries in Activity timeline
44. Form completion entries in Activity timeline
45. Hide office staff from dispatch grid toggle
46. ETA display on dispatch staff columns

End of build spec — 5 March 2026 Feed this entire document to Claude Code for implementation.
